Bolt Length Specification

Bolts and brackets may need to be purchased separately.

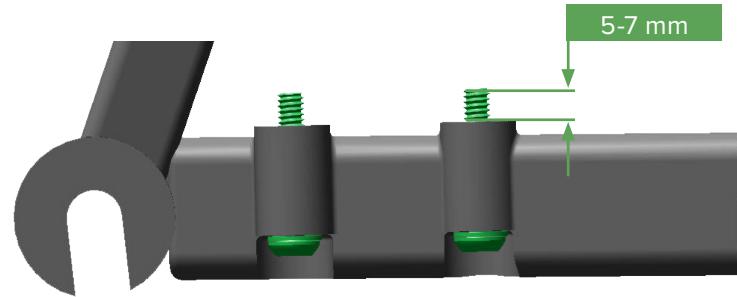

⚠WARNING

Choose the correct bolt length for proper thread engagement. Riding a bike with improper bolt engagement can allow the brakes to disengage from the bicycle, which can lead to a crash and serious injury or death to the rider.

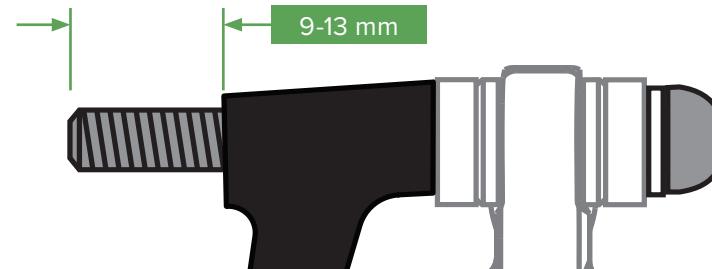

For forks and frames with thru bolt or flat mounts, with or without brackets, there must be 5-7 mm of mounting bolt thread engagement when mounting brake calipers.

For forks and frames with post mounts, with or without brackets and/or spacers, there must be 9-13 mm of mounting bolt thread engagement when mounting brake calipers.

² øX / øY show the recommended rotor size for rear and front use.

³ Consult the fork or frame manufacturer's specification before using a ø140 or a ø180 mm rotor. These rotor sizes have compatibility limitations on many frames and forks.

SRAM Caliper Type Identification

Flat Mount

Flat Tab

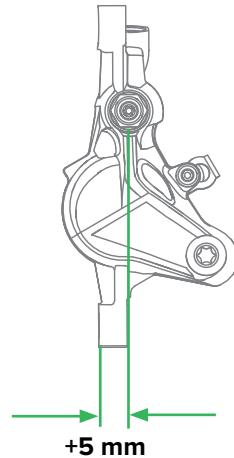

The caliper has flat tabs and may need a bracket to attach to the frame or fork.

Post Mount

Offset Tab

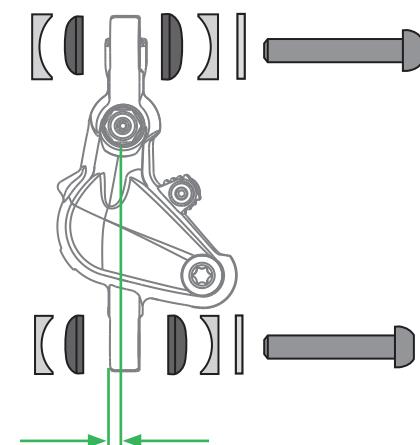

No CPS washers are needed between the caliper and mount (unless otherwise specified).

Post Mount- Caliper Positioning System (CPS)

Inline Tab

CPS washers are needed between the caliper and mount (unless otherwise specified).

Fork Mount Identification

Consult the fork manufacturer's instructions, or measure the distance between the center of each bolt hole, to identify the fork mount.

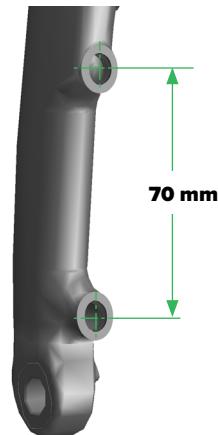

Flat mount is 70 mm.

Post mount is 74 mm.

Thru bolt fork is 34 mm, and have bolt holes that go through the fork leg.

IS mount is 51 mm.

Rotor and Mounting Configurations

Identify your frame or fork's mounting standard and the recommended rotor size, then use the chart to determine the appropriate mounting and hardware configuration.

Measure		Hardware		Brackets	
Flat Mount and Thru Bolt Fork		Rear		Front Flat Mount Bracket F0/F20*	
Measure from the centerline of the bottom slot to the centerline of the axle.		Measure from the centerline of the bottom slot to the centerline of the axle.		Position the Front Flat Mount Bracket to the 0 mm or the +20 mm orientation, according to the chart.	
					
Rotor Size		140 mm		Front Flat Mount Bracket F0 position	
Dimension A	23.5 mm	160 mm		Front Flat Mount Bracket F20 position

Rotor and Mounting Configurations for an Offset Tab Caliper

Identify your frame or fork's mounting standard and your preferred rotor size, then use the chart to determine the appropriate mounting configuration with an offset tab caliper.

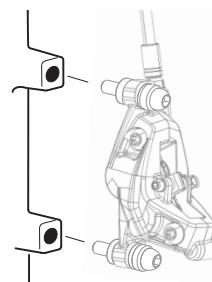

Offset Tab

Calipers with an Offset Tab do **not** need CPS washers between the caliper and mount, unless otherwise specified.

Direct Mount (Direct)

No post bracket or spacer(s) are needed to attach the caliper to the frame or fork.

Post Spacer (S)

Some rotor sizes require the use of spacer(s) to fit the caliper to the frame or fork.

Post Bracket (P)**

Some rotor sizes require the use of a post bracket to fit the caliper to the frame or fork.

* The 220 mm diameter rotor is designed for use with a 4-piston caliper.

** The 17P Post Bracket must be used with a 203 Post Fork or Frame that meets the SRAM Disc Brake Post Mount Specification in the *SRAM MTB Frame Fit Specifications* on www.sram.com/service.
